

Industry Solutions for K-12 and Higher Education

A Smarter Way To

Secure Our Future Generations

CHALLENGE

Schools are adding cameras, sensors, and connected devices to enhance safety, but outdoor Wi-Fi often remains fragmented, unreliable, and costly to expand—creating gaps that weaken reliability, slow response times, and increase costs.

SOLUTION

Ataya Chorus is a plug-n-play Private 5G solution that delivers fast, simple, and affordable solution that extends outdoor coverage far beyond the limits of traditional Wi-Fi. Powered by high-power 20-watt outdoor radios, Chorus can cover hundreds of acres with a single Private 5G access point—enabling secure, reliable connectivity for remote cameras, gate and door controllers, sensors, handheld devices, and more.

IMPACT

Schools gain real-time visibility to protect students, staff, and visitors. Faculty, security teams, and law enforcement can monitor and respond to events instantly—improving coordination, awareness, and overall campus safety. When paired with AI-enabled cameras, teams can detect events or anomalies in real time, enabling faster response, improved coordination, and proactive protection.
